CLIP TYPE

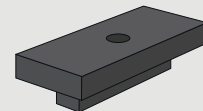

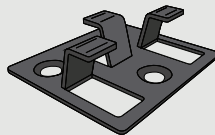

3MM

6MM

Standard Clips

Used to automatically gap your boards as well as secure them to your joists.

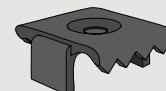

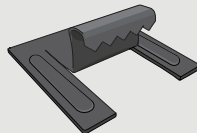

These go on every joist, except for the centre where a locking clip is placed.

Locking Clips

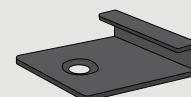

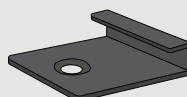

Use 1 locking clip on the centre joist of every board.

They bite into the board and anchor them to your subframe, stopping the boards from shifting as they expand and contract.

C-Clips

Used to install the first board of your deck, to support fascias, steps or install breaker boards.
